	Workhorse (2007)	E: Jennifer_Weaver@me.com
	Yanmar (2011)	

- Dates indicated in () above describe when the OEM first approved B20 or higher biodiesel blends
- **All major OEMs producing diesel vehicles for the U.S. market support at least B5 and lower blends, and in the GVW Class 5-8 vehicles that account for 92% of on-road diesel fuel use, the vast majority of the medium- and heavy-duty truck OEMs support B20.** The biodiesel component must meet ASTM D6751, and the B20 blends must meet ASTM D7467 specifications. Many OEMs also recommend the use of a BQ-9000 supplier.
